

Downhole Flow Control Equipment

10 Test Tools

10.3 R Selective Test Tool

R Selective Test Tool is a system designed to test tubing for leaks. The keys can be set or retracted as needed, seat on any R or RN nipple profile, including no-go systems. In a typical selective tubing strings, the tool functions by locating the RN nipple at the bottom

of the string, and then being pulled upwards to the R nipples until the leak is identified. It is offered in a number of bore sizes, and allows pressure to be applied from above and fluid flow below during operation.

Available tool sizes as shown. Please contact our sales office for further enquiries.
