

Running, Shifting and Positioning Tools

8 Soft Set Running Tool

The **Soft Set Running Tool** can be used to run and set Bottom Hole Instruments in to a well bore without the need to jar to release. The tool has a simple sit down action to affect hydraulic transfer and subsequent mechanical release. The Soft Set Running Tool is not sensitive to hanging weight which therefore eliminates the possibility of dropping

instruments prematurely. The Soft Set Running Tool has an interchangeable bottom sub which can be threaded to suit any industry standard connection. Alternatively, it can also be adapted to run instruments using standard internal and external fishing necks.

Available tool sizes as shown. Please contact our sales office for further enquiries.
